

About Me

A versatile Computer Engineering student and Junior SRE, uniquely combining full-stack development expertise with a deep focus on system observability. Proven track record of building end-to-end web applications while simultaneously managing complex monitoring infrastructures. Passionate about leveraging AI and modern engineering practices to bridge the gap between software development and system reliability.

Education

Istanbul Technical University - Computer Engineering | 2022 - 2027

Ödemiş Fen Lisesi | 2018 - 2022

Work Experience

ITU Directorate of Information Technology

Student IT Assistant | March 2026 - Present

WildCats Teknoloji

Jr. Sre & Observability Engineer | Oct. 2025 - Present

- Manage and instrument AppDynamics APM across complex distributed architectures to provide 24/7 full-stack visibility and ensure maximum system availability.
- Correlate frontend user experience metrics with backend performance data to proactively identify bottlenecks and optimize the entire request lifecycle.
- Develop responsive frontend components and scalable backend logic as a Full-Stack contributor, ensuring all new features are seamlessly integrated with observability and security frameworks.
- Design and automate real-time security dashboards and alerting thresholds to detect anomalies and enhance the incident response capabilities of engineering teams.

WEDCO Handelsgesellschaft m.b.H. | Vienna, Austria

Engineering Intern | June 2023 - August 2023

- Worked full-time as an assistant engineer and technical staff in an iron and steel industrial company in Austria, practical experience in a fast-paced environment
- Organized the department's website and managed time effectively, while also overseeing warehouse and stock control systems.
- Enhanced intermediate-level German and advanced-level English skills through daily interactions.
- Strengthened communication and teamwork abilities by collaborating with diverse, multicultural teams.

Skills & Competencies

Expertly navigates the intersection of Full-Stack Development and Site Reliability Engineering, with hands-on experience in building frontend and backend systems and monitoring them via AppDynamics. Proficient in Python, C/C++, and SQL, with a strong command of modern web technologies and Docker for containerization. Highly skilled in automating anomaly detection and utilizing AI tools to accelerate the development lifecycle and ensure high-performance, resilient software solutions.

Hobbies & Interests

- Board Member of ITU CYBER Club; orchestrating technical workshops and hands-on training sessions to foster a community of ethical hackers and security enthusiasts.
- Licensed Taekwondo athlete with seven years of competitive experience, translating the core values of discipline, strategic perseverance, and mental resilience into professional engineering challenges.

Languages

English – Intermediate (B2)
